INDEXER'S NOTE

The index of *The Medical Journal of Australia* is divided into two parts: (i) Subject Index and (ii) Author Index.

Subject Index: The subject headings used in this index are based on Medical Subject Headings 1998 compiled by the United States National Library of Medicine. Some additional headings have been added to accommodate Australian usage.

All material is indexed under major subject headings, with *see* references from alternative headings.

Articles listed in this index with a number before the title have been published as part of a series.

Bold entries indicate articles which have appeared in the Journal under these headings.

Author Index: Journal articles are indexed fully under the name of the first author. The name of each additional author appears with a *see* reference to the first author.
